## 🎯 CONCEPT EVALUATION

**ACCURACY > 80%?**

**No**

# ABILITY TO EXPLAIN

## Beginner

## ACCURACY FEEDBACK

### ✓ WHAT YOU DID WELL

- You spoke clearly and confidently while introducing your website project.
- You showed how to use VS Code editor and preview code live in the browser.
- You neatly explained HTML structural tags like headings, navigation links, and footer.

### ⚠️ WHAT COULD YOU DO BETTER

- Video content does not match expected topic. Expected: Building a 'Contact Us' Page. Shown: Explaining the 'Courses' page (courses.html).
- You did not explain how to create a link that opens the default email client using mailto:.
- You did not show how to create a clickable phone number link using tel:.
- You missed showing how to format a physical address using the semantic address tag.

### 🎯 SUGGESTION FOR TECHNICAL ACCURACY IMPROVEMENT

- Record a new video focused specifically on building the contact.html page.
- Explain how the anchor tag works with href='mailto:name@example.com' for sending emails.
- Demonstrate how href='tel:+1234567890' makes phone numbers clickable on mobile devices.

- Show how to group contact details inside the HTML address element for proper semantic markup.

## ☆ ABILITY TO EXPLAIN FEEDBACK

### ✓ WHAT YOU DID WELL

- You gave a clear introduction at the start by saying, "In this video I am going to explain the course page of my student portal".
- You followed a clear structure by explaining your HTML file from top to bottom, moving from the header to main section and footer.
- You successfully demonstrated how to run your code using Live Server to show the browser output.

### ⚠️ WHAT COULD YOU DO BETTER

- Your video did not match the expected topic. You explained a courses page instead of explaining how to build a 'Contact Us' page.
- You did not mention or explain how to create an email link using mailto: or a phone link using tel:.
- You missed explaining the semantic <address> tag and how to properly format a physical address in HTML.
- You only read through the text in your code without explaining how the HTML concepts work or why they are used.

### 🎯 SUGGESTION FOR IMPROVING EXPLANATION

- Always double-check the required topic before recording so that your video covers the specific assignment prompt.
- Try using real-life analogies, such as comparing a mailto: link to a pre-addressed envelope that opens your mail app.

- Explain the 'why' and 'how' behind HTML tags instead of just listing the course titles written inside your tags.
