Phase 1: Student Profile & Course Portal (HTML Only) - Displaying Your Grades with HTML Tables

📺 VIDEO ANALYZED:

https://youtu.be/CmJUINyPNmI

🎯 CONCEPT EVALUATION

ACCURACY > 80%?

No

ABILITY TO EXPLAIN

Advanced

ACCURACY FEEDBACK

✓ WHAT YOU DID WELL

- You clearly showed your web page output and VS Code editor side-by-side to demonstrate the project.
- You explained the table contents well, including columns like Course, Credit, Grade, and Status.
- You correctly highlighted the bottom rows displaying total credits, GPA, and pass status.

⚠️ WHAT COULD YOU DO BETTER

- You did not explain the specific difference between <th> (table header) and <td> (table data) tags.
- You missed talking about the scope attribute (col or row) and how it improves accessibility for screen readers.
- You showed <table>, <tr>, <th>, and <td> in your code, but you did not explicitly explain what each tag means and why it is used.

🎯 SUGGESTION FOR TECHNICAL ACCURACY IMPROVEMENT

- Explain each table tag clearly: state that <table> defines the table, <tr> defines a row, <th> is for header text, and <td> is for standard data.
- Add and explain accessibility features like scope='col' in <th> tags so screen readers can navigate tables easily.
- Practice explaining semantic tags like <thead>, <tbody>, and <tfoot> to give your HTML tables a clearer technical structure.

☆ ABILITY TO EXPLAIN FEEDBACK

✓ WHAT YOU DID WELL

- You gave a clear introduction to your academic grades web page.
- You clearly explained why the table is helpful for students to view their grades.
- You showed a great real-world example of a student portal with course grades and GPA.

⚠️ WHAT COULD YOU DO BETTER

- You did not explain the fundamental HTML tags like <table>, <tr>, <th>, and <td>.
- You did not explain the difference between table headers <th> and table data <td>.
- You missed explaining the scope attribute and how it improves web accessibility.
- You did not use any analogies to compare how table structures work.

🎯 SUGGESTION FOR IMPROVING EXPLANATION

- Try using an analogy, like comparing a <table> to a printed report card grid with rows and columns.
- Explain how <th> is used for headers to make text bold, while <td> is used for regular cell data.
- Explain how adding scope='col' or scope='row' helps screen readers understand table layout.
