ACCURACY FEEDBACK

✓ WHAT YOU DID WELL

- You clearly displayed your HTML code alongside the live browser preview in VS Code, making your page structure easy to follow.
- You pointed out the image element in your code where you defined `<img src="images.jpg" alt="women">` for the student photo section.
- You successfully demonstrated how to add lists in code using `<ul>` for hobbies and `<ol>` for skills.

⚠️ WHAT COULD YOU DO BETTER

- You mentioned the `<img>` tag but did not explain what `src` (source path) and `alt` (alternative description text) attributes do.
- You missed explaining structural container tags like `<section>` and `<div>` which help group content like hobbies and personal details.
- You showed `<ul>` and `<ol>` tags but did not explain how they work or when to choose ordered (numbered) versus unordered (bulleted) lists.
- You completely omitted explaining line breaks (`<br>`) and horizontal rules (`<hr>`).

🎯 SUGGESTION FOR TECHNICAL ACCURACY IMPROVEMENT

- Study and explain essential HTML attributes out loud, describing how `src` links to the file and `alt` improves accessibility.
- Incorporate semantic structural tags like `<section>` and `<div>` into your code to divide personal information and hobbies cleanly.
- Practice explaining the technical difference between ordered lists (`<ol>`) for sequential items and unordered lists (`<ul>`) for simple lists.

- Include a demonstration of self-closing elements such as `<br>` for line breaks and `<hr>` for horizontal dividing lines.

☆ ABILITY TO EXPLAIN FEEDBACK

✓ WHAT YOU DID WELL

- You gave a clear introduction at the beginning explaining that you are presenting your student profile web page.
- You followed a very logical order by walking through your code from top to bottom.
- You showed clear visual examples of your HTML tags like img, ul, and nav alongside the browser view.
- You concluded your presentation nicely by showing the final rendered web page preview.

⚠️ WHAT COULD YOU DO BETTER

- You did not use any analogies or real-world comparisons to explain HTML concept tag functions.
- You explained what code tags you used, but you did not explain why attributes like alt in img tag are important.
- You did not discuss how these HTML structure techniques apply to broader web design standards.

🎯 SUGGESTION FOR IMPROVING EXPLANATION

- Try using simple analogies, such as comparing HTML container tags to labelled box folders.
- Explain the purpose behind code tags, like explaining that alt text helps search engines and screen readers.

- Clearly contrast when to use an unordered list ul versus an ordered list ol to move up to Expert level.
